

## Chapter 2 Exercises

1. Populations may be defined by a variety of criteria, such as geographic location, time period, chronological age, stage of life, exposure to a particular event, or considerations relevant to the completion of a successful study. What eligibility criteria define the following populations?
  - a. Baby boomers
  - b. Inner-city teens
  - c. Women with ruptured breast implants willing to undergo an experimental implant removal technique
  - d. People who were bartenders in New York prior to the ban on smoking in restaurants and bars
  - e. People whose homes were flooded during Hurricane Sandy
  - f. People subject to strict gun laws
  - g. Korean women who work in nail salons
  - h. Children with asthma whose parents will follow instructions to administer a new medication
  - i. Survivors of the Chilean coal mine collapse
  - j. Men who have been prisoners at Guantanamo Bay

2. Arrange the above study populations in the table below according to whether entry is dynamic or stationary. How could eligible participants exit the study base?

Dynamic	Stationary
